

AI-Powered Incident Response with AWS DevOps Agent

Omshree Butani

- Senior FinOps Analyst, Cimpres
- AWS Community Builder | WTM Ambassador
- Co-leading AWS User Groups WIT - India

Customer Challenges

Increase in application complexity

Fragmented expertise with distributed systems

Telemetry spread across many tools

Firefighting vs systematic improvements

AWS DevOps Agent

Drive operational excellence with an autonomous AI agent that resolves and proactively prevent incidents in AWS, multi-cloud and on-prem envs

Autonomous Incident Response

Proactive Incident Prevention

On-demand SRE task handling

The 2AM Page

Alert: “Elevated 5xx errors on production API”

The manual process:

- SRE wakes up, opens laptop
- Checks CloudWatch dashboards
- Searches across multiple log groups
- Correlates metrics across services
- Reviews recent deployments
- Traces dependencies
- Forms hypotheses, tests one by one

**Typical time
to resolution:
1–2 hours**

The DIY Paths and its Limits

“I’ll just use my coding tool:”

Capability	DIY Tools	What Production Needs
Context	Whatever you paste in prompt	Auto-discovered topology across accounts
Access	Your personal credentials	Governed, cross-account IAM
Setup	Each engineer configures own tools	Zero per-user setup
Learning	Starts from scratch every time	Learns from every investigation
Audit	No trail	Immutable audit journals
Availability	When you open it	Always-on, autonomous

What makes DevOps Agent different?

The 6Cs Framework

1. Context

Topology Intelligence

2. Control

Governed Agent Spaces

3. Convenience

Zero Per-User Setup

4. Collaboration

Slack, ServiceNow,
PagerDuty

5. Continuous Learning

Three-Tier Skill Hierarchy

6. Cost Effective

Pay-Per-Investigation

AWS DevOps Agent: Transforming Incident Response and Operations

MTTR REDUCTION

75%

Average

Range: 50-92%

INVESTIGATION TIME

80%

Faster

42 min → 8 min per incident

ROOT CAUSE ACCURACY

94%

Average

Range: 84-100% accuracy

RESOLUTION SPEED IMPROVEMENT

8.5x

Faster

Range: 7-10x faster

PRODUCTIVITY GAINS

57 hrs/mo

Average Hours/Month Saved

Range: 22-120 hrs/month saved

Getting Started with AWS DevOps Agent

START WITH A QUICK WIN

1. Create Your Agent Space
 - Navigate to AWS DevOps Agent in AWS Management Console and create your first Agent Space
2. Connect Your Tools
 - Link existing observability tools (Datadog, Grafana, Dynatrace) to access telemetry data
3. Run Your First Investigation
 - Configure automatic incident response or manually investigate an alert. Review findings and provide feedback
4. Reinvestigate a Recent Incident
 - Choose a production incident from the past 30 days. Compare AWS DevOps Agent results to demonstrate time savings
